                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  increased levels of a desaturase. Desaturases can be used for desaturating fatty acids. The enzymes can be used to produce polyunsaturated fatty acids, which can be used for treating malnutrition, in pharmaceutical compositions, in cosmetics or in animal feed. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present sequence represents a peptide derived from a desaturase enzyme. The specification describes methods for desaturating a fatty acid and for producing a desaturated fatty acid by expressing fatty acid and for producing a desaturated fatty acid by expressing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Example 2; Pages 105-106; 165pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New isolated fatty acid desaturase enzymes - used for the produc of polyunsaturated fatty acids for use in, e.g. pharmaceutical compositions, nutritional compositions, cosmetics or animal feed

         particular, the enzyme is useful for producing polyunsaturated fatty acids and for generating enzyme-specific antibodies useful for identifying desaturases. Oil-seed plants may be engineered to incorporate the enzyme, so that the plants produce seed oil rich in fatty acids. The fatty acids could be incorporated usefully into infant formula, foods of all kinds, dietary supplements, nutriceutical and pharmaceutical
                                                                                                     This is the Caenorhabditis elegans fatty acid delta-5 desaturase. The CDNA sequence is useful for recombinant production of the enzyme and i generating transformed host cells and transgenic plants. The desaturas can be used for creating a double-bond between two carbons. In
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                where administration of polyunsaturated fatty acids may have beneficial disease-preventative effects. The polyunsaturated fatty acids can be used in foodstuffs or dietary supplements. The Delta 5-fatty acid desaturases can also be used for the synthesis of prostaglandins or modulation of the synthesis. The products can also be used for detection and diagnosis. The present sequence represents the C. elegans delta 5-fatty acid desaturase.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Mortierella alpina and Caenorhabditis elegans. The Delta 5 fatty acid desaturases catalyze the production of polyunsaturated fatty acids, e the conversion of dihomogamma linolenic acid to arachidonic acid. The

                                                                                                                                                                        This invention describes a novel sphingolipid desaturase that selectively introduces a double bond into the sphingobase of the ceramide residue of chirtoduces and capnoids. A DNA sequence encoding the sphingolipid CC desaturase, or a vector containing the DNA sequence, can be used to CC produce transgenic plants, especially crop plants, with an increased or CC decreased delta-8-unsaturated long-chain base content or an altered CC delta-8-unsaturated long-chain base content or an altered CC compensate for a delta-8-unsaturated long-chain base deficiency, to CC exclude production of delta-8-unsaturated bases, to increase tolerance CC or resistance to soil salinity, ion stress or toxicity, drought, wet CC conditions, cold or frost and/or phytopathogenic microorganisms, or to CC alter size growth and flowering time. Cells, transgenic organisms or CC plants containing the DNA sequence can be used to produce sphingolipids CC can be used in cosmetics, pharmaceuticals and foods and as chemical raw CC materials. This sequence represents a protein which has delta6 fatty acid desaturase activity which is described in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sox

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           20
                                                                                                                                                                                               desaturase enzyme. The enzyme sequence is used in the methods of c the invention. The specification describes methods for desaturating a content of the invention. The specification describes methods for desaturating content of the invention of the producing a desaturated fatty acid by expressing content of the introduces of a desaturate. The present desaturate is an enzyme which introduces a double bond carbons 6 and 7 from the carboxyl end of cards. The enzyme can be used for desaturating fatty acids. The enzyme can be used for desaturating fatty conditions. The enzyme can be used for treating malnutrition, in pharmaceutical compositions, in cosmetics or in animal feed. The polyunsaturated fatty acids can be used for treating e.g. restenosis after angioplasty, can be used for treating the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the cond

               This represents a Mortierella alpina delta 6 desaturase. The invention crelates to a nucleic acid construct that contains at least one of the nucleotide sequences (AAX00889 to AAX00891) encoding M. alpina delta 6, cd delta 12 and delta 5 desaturases (AAW95504 to AAW95506) respectively. CC coupled to an expression control sequence functional in plants. CC Recombinant plant cells containing at least one DNA encoding a M. alpina fatty acid desaturase (FAD), can be used for the production of plants. CC polyunsaturated fatty acid (PUFA). These recombinant cells or plants cc containing them are used to produce oils such as linoleic acid, arachidonic acid, yamma-linolenic acid, dihomo-gamma-linolenic acid, containing them are used to produce oils such as linoleic acid, containing them are used to produce oils such as linoleic acid, containing them are used to produce oils such as linoleic acid, containing them are used to produce oils such as linoleic acid, containing them are used to produce oils such as linoleic acid, containing them are used to produce oils such as linoleic acid, containing all accompanies of the containing accompanies of the containing disorders associated with inadequate consumption or containing disorders associated with inadequate consumption or containing and containing and containing and containing and containing and containing and containing and containing and containing and containing and containing and containing and containing and containing and containing and containing and containing and containing and containing and containing and containing and containing and containing and containing and containing and containing and containing and containing and containing and containing and containing and containing and containing and containing and containing and containing and containing and containing and containing and containing and containing and containing and containing and containing and containing and containing and containing and containing and containing and containing and containing an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Matches

The specification describes methods for desaturating a fatty acid and for producing a desaturated fatty acid by expressing increased levels of a desaturate. The present desaturates is an enzyme which introduces a double bond carbons 6 and 7 from the carboxyl end of a fatty acid molecule. The enzyme can be used for produce polyunsaturated fatty acids. The enzyme can be used for produce polyunsaturated fatty acids, which can be used for treating malnutrition, in pharmaceutical compositions, in commetics or in animal feed. The polyunsaturated fatty acids can be used for treating e.g. restenosis after angioplasty, inflammation, rheumatoid arthritis, asthma, psoriasis, cancer, diabetes or eczema or reduce blood pressure. They can also be used to inhibit platelet aggregation, cause vasodilation, lower cholesterol levels, inhibit proliferation of vessel.
                                                                                                                                                                                                                                                                                                                                                            Chaudhary S, Thurmond J;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               cancer; diabetes; eczema; platelet aggregation; vasodilation;

Recombinant plants can produce high yields of UFA, since new pathways can be created and unwanted ones suppressed. lants can be engineered to express oils of particular PUFA composition, g. one similar to that in human milk, and product recovery is simpler
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Local

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               CC comprising a nucleotide sequence which encodes a polypeptide comprising CC residues 50-53, 39-43, 172-176, 204-213, or 390-402 of delta-6 cd desaturase (AAY92599) or comprising delta-12 desaturase (AAY92600) are C claimed. Oil and fatty acids (especially gamma-linolenic acid) isolated CC from the recombinant insect cells are also claimed. Production of CC polyunsaturated long chain fatty acids (PUFAS) in insect cells has many CC advantages, as insect cells have greatly simplified lipid compositions, are not subject to external variable fluctuations, and can easily be CC maintained and manipulated. The oils are used in pharmaceutical CC compositions, infant formulas, dietary supplements or substitutes, and CC cosmetics (all claimed). The PUFA supplements have antinflammatory, CC antirhemmatic, antiasthmatic, antipsoriatic, osteopathic, cytostatic, antidiabetic, dermatological, gynecological, anti-HIV, neuroprotective, Dypotensive, nephrotropic, vasodilator, antiaggregant and vasotropic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match

            The invention relates to a method of generating novel compositions comprising animal cells producing essential fatty acids (FAs). The animal cells are produced by transforming cells, e.g. embryonic stem cells, with nucleic acid encoding heterologous enzymes involved in fatty acid, e.g. long chain or polyunsaturated fatty acid (PFA) biosynthesis. This sequence corresponds to a fungal delta6-desaturase whose coding sequence is an example of a nucleic acid sequence used to transform the cells. The essential FAs obtained can be used in nutritional formulations or animal feed formulations. The long chain PFAs can be used in nutritional
                                                                                                                                                                                                               Producing essential fatty acids and long-chain polyunsaturated fatty acids, for use in nutritional, animal feed and medical formulations
                                                                                                                                                                                 Disclosure;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         products can also be used for producing transgenic animals which can be used for producing essential FAs which can be used for producing downstream products such as leukotrienes, thromboxanes, arachidonic acid, elcosapentaenoic acid or docosahexaenoic acid. The products can also be used in cell culture. The animal or milk fat produced can be administered
                           polynucleotide sequence was used to trasfect mammalian cells, to produce animal cells expressing a desaturase gene and/or an elongase gene. Compositions comprising cells of the invention are useful for synthesising essential fatty acids, their derivatives or downstream products, as well as altered levels of long-chain polyunsaturated fatty acids and elcosanoids. The compositions are useful in nutritional formulae, e.g. infant formula, dietary supplements or dietary substitutes for both humans and animals. The compositions are also useful in cosmetic or animal feed formulations. Furthermore, the compositions may also be used as fat free media or as research reagents
                                                                                                                                                                                                                                                              New compositions comprising cells that express desaturases and elongases, for synthesizing essential fatty acids or long-chain polyunsaturated fatty acids, used in nutritional, cosmetic or animal

                                                                                                                                                                                                   This is the Euglena gracilis fatty acid delta-8 desaturase. The cDNA sequence is useful for recombinant production of the enzyme and for generating transformed host cells and transgenic plants. The desaturase can be used for creating a double-bond between two carbons. In particular, the enzyme is useful for producing polyunsaturated fatty acids and for generating enzyme-specific antibodies useful for identifying desaturases. Oil-seed plants may be engineered to incorporate the enzyme, so that the plants produce seed oil rich in fatty acids. The fatty acids could be incorporated usefully into infant formula, foods of all kinds, dietary supplements, nutriceutical and pharmaceutical

                                                                                                                                                                                                                                            The present sequence is a delta-6 fatty acid desaturase protein sequence from clone pps.pk0011.d5:fis isolated from Florida bitterbush developing seed cDNA library, pps. The delta-6 desaturase enzyme catalyses the formation of tariric acid, a fatty acid that has a triple bond at the delta-6 carbon. The present sequence is useful for producing transgenic plants having altered levels of delta-6 desaturase which in turn would alter the fatty acid composition. The enzyme is also useful for producing polyclonal or monoclonal antibodies. The polynucleotide is useful as primer or probe for screening cDNA libraries to isolate desired full-length cDNA clones.
                                                                                                                                                                           Sequence

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
